

# Astroneer Life 2: A New World

By: James Clark

## Table Of Contents

Planet atrox.

SPEEED!

“boom” what was dat?

THE POWER!

On to new planets!

## Planet Atrox

I Just landed on a planet called atrox. It was... green everywhere. It was odd,... there were these bumps that looked weird. At that moment I found a melting ship and an astroneer named john. He was dying and gave me a chip and told me that I was his brother. Then he died and I didn't really care so I looted all his stuff and found some interesting things like a portable oxygenator and some small batteries. I put the oxygenator on my terrain tool and the batteries on my pack. I walked around with my portable oxygenator on until I found some compound. I made some tethers and placed them around my ship and started printing a generator and a small printer out of my pack. Then I went exploring.

## SPEEED!

When I got back I researched the chip and found that it could be used to make a hoverboard or a VTOL which is basically a flying car. So I made a hoverboard because a VTOL is hard to make and I wanted a taste of speed so I put it on my pack and rode around a bit and then I went on an adventure to find more chips. That's when a new message appeared in my vision and I almost crashed because of it but managed to stop. It said “H\_bodie201 has joined the game”.

So I found another chip and decided to go back home to make a hoverboard for Bodie.

## BOOOOM

BOOOOOOOOOOOOOOOOM what was that i started racing back to my ship but i was running low on power. So I kicked my board into overdrive to see another astroneer blowing mine and bodie's stuff up. So we grabbed what we could and flew off world immediately and decided to go back to the planet sylvia to refuel our rocket and so we could make some more stuff. When we got back our base was still intact, luckily. So we decided to make some atmospheric condenser

and a soil centrifuge. We chilled there for a while until we decided to go into the mines to get some stuff for a chemistry lab. When we got back we started up the printer and started making more resources with the centrifuge so we could make some hydrazine jetpacks to go with our hoverboards. We made the jetpacks and decided to chill around the base for a while.

## THE POWER TOWER

A storm came and blew away our power supplies so everything didn't work or was going really slow. So me and bodie ran around looking for something to help until I said let's make a tower really high up so the storm can't blow it away. So me and bodie got to work making towers that spiral up into the sky. Once we each had made two towers around the base we stopped. Began slowly but surely making wind turbines, solar panels and RTG's to put on the towers. Once we were done we ran up the tower and connected all the power supplies. And then when we went to connect the power towers to the base the cords were too short. So we painfully went back to make more extenders but in the end, we plugged everything in.

## ON TO NEW PLANET'S!

When all was done we grabbed some tents, packaged them up and got into the ship with some other supplies and shot off into space to go to glacio to get some titanite and stuff.

THE END for now
